The Hormone Handbook 2nd Edition

Thierry Hertoghe

The Hormone Handbook 2nd Edition Thierry Hertoghe

Dr Thierry Hertoghe is at the basis of various extensive review reports on corrective (or replacement) hormone therapies: melatonin, DHEA, growth hormone, cortisol, thyroid T3-T4 treatments, 24-hour urine hormone tests of the Belgian Society of Anti-Aging Medicine. All in English, except one on DHEA treatment. Most of these works are reviews on one particular hormone therapy and constitute evidence-based answers to hormone therapy controversies. The first edition has been a tremendous success among physicians. The long-awaited second edition with improvements in many sections of the book will boost their enthusiasm: Added: 30% more practical information in 850 pages. Added: Six new chapters on major hormones that will change the physician's practice: IGF-1 and insulin, both possibly more potent than growth hormone, vasopressin the wrinkle-reducer, oxytocin the orgasm-restorer, MSH therapies far more potent than testosterone for male and female sexuality, and parathormone, the major anti-osteoporosis hormone. Added: Updated scientific references with essential data that justifies the use of hormone therapies better than ever: protective effects of hormones in cancer patients, increased risk of disease in patients whose hormone levels remain within the lower half of the reference range, etc.
